## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election without traverse of Group I, claims 1-6, in Paper No. 8 is acknowledged.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Reale (U.S. 4,135,517). Reale teaches a provisional femoral head 30 comprising a spherical body having a generally cylindrical internal aperture 33 formed in a distal end thereof, said spherical body including a cutout 31 intersecting said internal aperture, said cutout sized whereby a provisional femoral neck can traverse said cutout 31 to be positioned within said internal aperture 33; wherein said spherical body further includes a vent aperture 32 fluidly connecting said internal aperture 33 and a proximal end of said spherical body.

***Allowable Subject Matter***

Claims 2 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lilley (U.S. 5,879,406) and Koller (EP 1258233) have been cited as teaching a joint bioprostheses having structure similar to that of the present invention. Broderick et al. (U.S. 5,156,626) has been cited as teaching provisional prostheses having a interior surface 34 and channel 35.
